WASP WILDFIRE PROTECTION KIT

Many homes lost to wildfire burn from the roof down. In the event of nearby wildfire, one of the most effective ways to help protect your home is to keep the roof and surrounding area wet because embers can blow in from fires several kilometers away to ignite the roof.

The WASP Wildfire Protection kit is an easy-to-install gutter mounted sprinkler system that provides a 360 degree continuous spray. Each kit has everything needed to help protect a standard home: 2 agricultural grade sprinkler heads designed to conserve water and work on very low pressure and rated for a 10m spray radius, 2 patent pending gutter mount brackets, 2 fence/fascia brackets, all required standard garden hose fittings and connections and 2 x 7.6m lengths of forestry grade lay flat hose with standard garden hose connectors. This product was previously only available to professional firefighters, but is newly available to home-owners.

For every kit purchased through the Wasa Volunteer Fire group's bulk buying program, WASP Manufacturing will contribute a portion to the Wasa Fire program. Not only that, but the price of each kit will decrease the more kits are ordered. Price will be approximately

\$180.00 (includes shipping) depending on how many orders we receive. To purchase your kit contact kathyemccauley@gmail.com

For more info, testimonials, and videos on how the system is used, go to www.waspwildfire.com

WASP Manufacturing is a Canadian company based in Port Coquitlam, BC
